SCOPE OF WORK

Consumer Dues & EMI Management Android App
with Admin Panel

Prepared by

CODTECH PRIVATE LIMITED

1. Project Overview

Thisdocumentdefines the scope of work for the design, development, testing and delivery of an Android mobile application that lets consumers view and pay their outstanding dues, track EMI schedules and payment history, and explore available card types. A web-based Admin Panel allows the business team to maintain each consumer's financial status. CODTECH PRIVATE LIMITED will carry out end-to-end Android app development along with the admin panel and backend.

2. Objectives

- Give administrators a single place to update every consumer's outstanding amount, total payment due and next EMI date.
- Give consumers a secure login to view their latest account status at any time.
- Enable consumers to pay dues online and access complete payment history.
- Showcase the different card types offered so consumers can view their details.
- Deliver a stable, secure and fast Android application backed by one year of technical support.

3. System Components

- **ConsumerAndroidApp** (Android only, total Android app development)
- **Admin Panel** (web-based dashboard for the business team)
- **Backend / API and Database** shared by the app and the admin panel
- **Payment Gateway Integration** for online due payments

4. Admin Panel Scope

TheAdminPanelisaccessedbyauthorised administrators through a secure login and includes:

4.1 Consumer Management

- Add, edit, view and deactivate consumer records (name, mobile, email, address, account/reference number).
- Search and filter consumers by name, mobile number, account number or due status.

4.2 Outstanding and Payment Due Updates

- Update the **outstanding amount** for each consumer.
- Update the **total payment due** for each consumer.
- Set and update the **next EMI date** and EMI amount.
- Bulk update through Excel/CSV upload.
- Every update is reflected in the consumer's app and logged with date, time and admin user.

4.3PaymentsandHistory

- View all payments received online, with status (success, failed, pending).
- View per-consumer payment history and download reports.
- Record offline or manual payments where required.

4.4 Card Type Management

- Add, edit and remove card types shown in the app (name, image, features, benefits, charges).
- Enable or disable individual card types.

4.5 Dashboard and Reports

- Summary of total consumers, total outstanding, total dues collected and upcoming EMIs.
- Exportable reports (Excel/PDF) for dues, collections and EMI schedules.

4.6Notifications

- Push notifications to consumers for upcoming EMI dates, payment confirmations and balance updates.

5. Consumer Android App Scope

5.1 Login and Registration

- **Continue with Google** sign-in.
- **Email and password** login, with sign-up and forgot/reset password.
- Secure session handling and logout.

5.2 Home Dashboard

- Current **outstanding amount** and **total payment due**.
- **Next EMI date** and EMI amount, with a clear due-soon indicator.
- Quick access to Pay Now, Payment History and Cards.

5.3PayDues

- Pay outstanding dues or EMI online through an integrated payment gateway (UPI, debit/credit card, net banking).
- Instant payment confirmation and downloadable receipt.

5.4PaymentHistory

- Complete list of past payments with date, amount, mode and status.
- Receipt view and download for each payment.

5.5 Consumer Details

- View all account details: profile, account number, EMI schedule and dues summary.
- Edit permitted profile information.

5.6 Card Type Showcase

- Browse all card types with images, features, benefits and charges.
- Detailed view for each card type.

5.7Notifications

- Push alerts for upcoming EMI, due reminders and payment status.

6.TechnicalApproach

- Native Android application for phones, compatible with all commonly used Android versions and screen sizes.
- Secure REST APIs, encrypted data transmission (HTTPS) and role-based admin access.
- Cloud-hosted backend and database with regular backups.
- Fast loading, responsive and user-friendly interface.

7. Development Process

- **Requirement Analysis:** finalising features, flows and data fields.
- **UI/UX Design:** wireframes and screen designs for app and admin panel, shared for approval.
- **Development:** backend, admin panel and Android app.

- **Integration:** Google sign-in, payment gateway, push notifications.
- **Testing:** functional, security, performance and device testing.
- **Deployment:** server setup and Google Play Store publishing support.
- **Handover:** source code, credentials and basic usage guidance for admins.

8. Deliverables

- Android application (APK / AAB) ready for Play Store.
- Admin Panel (web) with secure login.
- Backend APIs and database.
- Source code and technical documentation.

9. Support and Maintenance

CODTECH PRIVATE LIMITED will provide **1 year of technical support for bug fixing** from the date of go-live. This covers fixing defects and errors in the delivered features. New features, major changes to scope and third-party service charges are not included and will be quoted separately.

10. Client Responsibilities

- Provide consumer data, card type content and images, and branding assets (logo, colours).
- Provide timely feedback and approvals at each stage.
- Arrange payment gateway merchant account, Google Play Developer account and any required third-party accounts.

11. Exclusions

- Features not listed in this document.
- iOS app and customer-facing website (can be added on request).
- Recurring third-party costs such as SMS/email services, payment gateway fees, hosting beyond agreed terms and Play Store fees.

12.Assumptions

- Consumer dues and EMI data are maintained by the admin team through the Admin Panel.
- Scope changes after approval will be assessed for time and cost impact.

13. Acceptance

The work will be considered complete once the deliverables are tested and approved by the client. Commercials, timeline and payment milestones will be shared in the quotation.
